

Aishwarya Ankobrao Kalaishekar

Data Analyst

Location: MO, USA | [Mail](#) | Ph : +13146901668 | [LinkedIn](#)

SUMMARY

- Data Analyst with over 5+ years of experience delivering actionable insights in the healthcare and finance Sectors.
- Specialized in building robust predictive systems, streamlining data workflows, and crafting interactive visual analytics to support organizational goals.
- Demonstrated strength in harmonizing disparate datasets, ensuring regulatory compliance, and applying statistical techniques for trend evaluation.
- Skilled in a wide range of technologies, including Python, SQL, DBT, Airflow, Tableau, SSIS, Spark, Epic, Cerner, Meditech, Azure Synapse, Power BI, AWS, and various healthcare data standards.
- Consistently recognized for driving operational efficiency, improving forecasting accuracy, and implementing impactful, data-driven solutions.

SKILLS

Programming Languages:	Python, SQL, SAS, R, Scala
Methodologies	SDLC, Agile (Scrum, Kanban), Waterfall
Data Processing & ETL:	DBT, Apache Airflow, Talend, SSIS, Hadoop, Apache Spark (PySpark, SparkSQL), Data Transformation, Data Wrangling, Data Cleaning
Data Warehousing & Cloud:	Azure Synapse Analytics, AWS (Data Pipelines, Storage), Azure Data Factory (ADF), Snowflake, Google BigQuery, Amazon Redshift
Data Visualization & Reporting:	Tableau, Power BI, Looker, SQL Server Reporting Services (SSRS), Microsoft Excel, Informatica, Teradata
Machine Learning & Analytics:	Supervised Learning (Regression, Classification), Unsupervised Learning (Clustering, PCA), Scikit-learn, Keras, TensorFlow A/B Testing, Predictive Modeling, Fraud Detection Models, Forecasting & Modelling, Hypothesis Testing, Regression Analysis, Probability Distributions, Linear Algebra, Advanced Analytics, Data Mining
Healthcare Data Standards:	FHIR APIs, HL7 v2/v3, ICD, CPT Codes, LOINC, EDI, EHR
Database Management:	MySQL, PostgreSQL, MongoDB, Oracle, Teradata, MS SQL Server, MS Access, Oracle PL/SQL, IBM DB2
Big Data & Distributed Software and Libraries	Apache Spark, Hadoop, Kafka, Databricks Computing: SSMS, SSIS, SSRS, MS Office, Pandas, NumPy, Matplotlib, Seaborn, ggplot, dplyr, tidyr
Security & Compliance:	HIPAA, Data Anonymization, Encryption Techniques
Collaboration & Agile Tools	Jira, Confluence, Git, GitHub, SVN, Strong Communication & Team Collaboration
Other Skills:	OLAP, OLTP, Data Architecture, Database Building, Data Profiling, Data Reporting
IDEs:	Visual Studio Code, Jupyter Notebook
Operating System:	MacOS, Windows, Linux

EXPERIENCE

Midwest Health Initiative – MO, USA | Data Analyst | September 2025 – Present

- Analyzed enterprise-scale healthcare data (EHR, medical & pharmacy claims, clinical datasets) to identify utilization trends and cost drivers, enabling data-driven decisions across operations and care management teams.
- Engineered complex SQL solutions (CTEs, window functions, stored procedures) on 100TB+ claims data, improving reporting accuracy and supporting finance and population health analytics.
- Built supervised machine learning models in Python to forecast utilization and assess patient risk, helping stakeholders anticipate trends and optimize care strategies.
- Designed scalable Snowflake data warehouse architectures and optimized data models, significantly improving query performance and secure access to clinical data.
- Developed automated ETL pipelines using Informatica and Azure Data Factory, migrating data from SQL Server, MySQL, and PostgreSQL to cloud data lakes, saving 4+ hours/week in manual effort.

- Delivered executive-ready Power BI dashboards and experiments (A/B testing, statistical analysis), reducing claims processing time by 15% and increasing customer satisfaction by 10%, while maintaining HIPAA/GDPR compliance.

Molina Healthcare – Texas, USA | Data Analyst | May 2024 – September 2025

- Analyzed healthcare data from EHRs, claims, and clinical trials using advanced analytics tools to uncover key insights and trends.
- Designed and executed complex SQL queries on 100TB+ claims data using stored procedures, triggers, CTEs, window functions, and joins to support finance and operations.
- Built supervised machine learning models in Python to forecast health trends, assess risk factors, and deliver personalized treatment recommendations.
- Collaborated with clinicians and researchers to gather data requirements, define KPIs, and deliver data-driven recommendations.
- Ensured data privacy and compliance with HIPAA and GDPR through robust data governance practices.
- Designed and implemented Snowflake data warehouses to enhance the scalability and efficiency of clinical data storage and access.
- Created real-time Power BI dashboards to monitor patient flow, provider utilization, and retention, improving decision-making for healthcare providers.
- Developed ETL pipelines using Informatica and Azure Data Factory to migrate data from SQL Server, MySQL, and PostgreSQL to cloud data lakes, saving four labor hours weekly.
- Conducted A/B testing on claims processing strategies, leading to a 15% improvement in processing times and a 10% increase in customer satisfaction.
- Used statistical modeling in R (t-tests, chi-square, ANOVA) to evaluate treatment efficacy and improve healthcare delivery outcomes.

HCL Tech – India | Data Analyst | April 2019 – July 2023

- Analyzed large-scale customer and transaction datasets to identify patterns, trends, outliers, and business opportunities, supporting strategic decision-making.
- Designed and maintained Tableau dashboards and reports to deliver actionable insights and key performance metrics for executives and non-technical stakeholders.
- Built ARIMA models in Python for time series forecasting, resulting in a 12% reduction in excess inventory and improved sales predictions.
- Developed and deployed ETL workflows using Talend to integrate data from various internal and external sources seamlessly.
- Automated data preprocessing with Pandas, NumPy, and Scikit-learn, enhancing data quality and accelerating machine learning workflows.
- Created Tableau dashboards from Teradata, AWS Redshift, and Google BigQuery, supporting business units with effective SWOT analyses.
- Optimized SQL performance through materialized views, partitioning, and indexing, reducing query latency by 15% and boosting database efficiency.

EDUCATION

Master of Computer Science and Information Science - Saint Louis University, MO, USA

Bachelor of Computer Science and Information Science - Visvesvaraya Technological University (VTU), India

CERTIFICATES

- Data Visualization for Data Analysts and Analytics
- Python Programming and Network Simulators in association with ISTE, NEW DELHI
- AWS Technical Essentials, Amazon Web Services
- Google Analytics Individual Qualification, Google
- Introduction to Data Science-Cisco
